DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1, 4-5, and 9 are rejected under 35 U.S.C. 102(e) as being anticipated by Henley et al. (Henley) '6,458,109.

For claims 1, 4, 5, and 9, Henley teaches a wound treatment apparatus with a bandage assembly that includes a drainage bandage 20 (screen means) that contacts the wound and a delivery bandage 18 that seals the drainage bandage 20 and the wound site (col. 5, lines 11-17), a vacuum source fluidically communicating with the drainage bandage 20 via flexible tube 24, a sensing device (172 or 174) interposed between the delivery bandage and the vacuum source, and a collection canister (164 or 166) interposed between the drainage bandage 20 and the sensing device (172 or 174) (figs.1 and 19 and col. 13, lines 1-3).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 2 and 3 are rejected under 35 U.S.C. 103(a) as being unpatentable over Henley et al. (Henley) '6,458,109 in view of Overton et al. '5,611,846.

For claims 2-3, Henley does not teach that the sensing device comprises a gas chromatograph comprising of a photo diode. Gas chromatographs are commonly used in the art to identify the contents of gaseous samples. Overton et al. teaches a portable gas chromatograph comprising a photoionization (which contains a photo diode) detector (col. 12, lines 23-26). Therefore it is obvious to one with ordinary skill in the art at the time the invention was made to substitute the sensor of Henley for the gas chromatograph of Overton et al. in order to detect microorganisms in the drainage fluids.

Claim 4 is rejected under 35 U.S.C. 103(a) as being unpatentable over Henley et al. (Henley) '6,458,109 in view of Lewis et al. '6,017,440.

For claim 4, Henley does not teach that the sensing device comprises a sensor array. Lewis et al. teach sensor arrays for detecting microorganisms. Therefore it is obvious to one with ordinary skill in the art at the time the invention was made to substitute the sensor of Henley for the sensor array of Lewis et al. in order to detect microorganisms in the drainage fluids.

Claim 6 is rejected under 35 U.S.C. 103(a) as being unpatentable over Henley et al. (Henley) '6,458,109 in view of Scherson et al. '5,855,570.

For claim 6, Henley does not disclose a dressing (screen means) that is embedded with a sensing device. Scherson et al. teaches an oxygen- producing bandage with several layers, wherein one of the layers comprise a sensor (col. 4, lines 31-39). Therefore it is obvious to one with ordinary skill in the art at the time the invention was made to provide the invention of Henley with a dressing embedded with a sensor in order to detect the pressure in the atmosphere at the wound area.

Claim 7 is rejected under 35 U.S.C. 103(a) as being unpatentable over Henley et al. (Henley) '6,458,109 in view of Fleischmann '6,398,767.

Application/Control Number: 10/090,358

Art Unit: 3761

For claim 7, Henley does not teach that the sensing device is disposed on sealing means. Fleischmann teaches a wound treatment apparatus that comprises a sealing means 14 and a sensing device 38 that is disposed on the sealing means 14 and is in contact with a screen means 12 (fig.1 and col. 4, lines 62-64). Therefore, it is obvious to one with ordinary skill in the art at the time the invention was made to provide the sealing means of Henley with a sensing device to detect the pressure in the atmosphere near the wound area.

Claim 8 is rejected under 35 U.S.C. 103(a) as being unpatentable over Henley et al. (Henley) '6,458,109 in view of Parker et al. '4,955,391.

For claim 8, Henley discloses a canister and a sensing device outside of the canister but does not disclose a sensing device located in the canister. It is well known in the art that canisters are used as collection devices for fluids, and, thus, the fluids can be assessed. Parker et al. teaches a fluid monitoring apparatus comprising a canister 22 with a sensing probe 64 mounted inside the canister (col.5, lines 16-21). Therefore, it is obvious to one with ordinary skill in the art at the time the invention was made to modify the location of the sensing device from being placed outside of the canister to being placed within the canister for more accurate sensing of pressure within the canister.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. U.S. Patent 6,190,858 is drawn to an apparatus for detecting microorganisms using gas sensors.
